Scoring table: PAM 150 Gap 11

Searched: 116695 seqs, 37453910 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir58 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 42.120; Variance 104.479; scale 0.403

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The polypeptides are capable of forming antigen binding structures with specificity for Rhesus D antigens which include Rhesus D-specific CDR; CDR; CDR; and CDR; aregions of pairs of conclude Rhesus D-specific CDR; and LDR; and CDR; aregions of pairs of contibodies are active against the Rhesus D antigen. They can be used for treating disorders which would benefit from anti-Rhesus D immunoglobulin, e.g. idiopathic thrombocytopenic purpura. They can also be used for the protection of Rhesus negative women before or immediately after the birth of a Rhesus positive child to prevent haemolytic disease of the newborn (HDN) in subsequent pregnancies. In addition, anti-Rhesus D cimmunoglobulin can be used after mistransfusions of Rhesus positive blood to Rhesus negative recipients in order to prevent sensitisation to the chesus D antigen. The products can also be used as diagnostic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

PS Claim 25; Fig 6; 107pp; English.

CC raim 25; Fig 6; 107pp; English.

CC region (VI) of a humanised alpha-4 integrin antibody 21.6. It is composed of complementarity determining regions (CDRs) from the VI.

CC region (See W22409) of mouse alpha-4 integrin monoclonal antibody 22.6 and a modified human REI framework. It can be expressed in CC mammalian host cells following PCR amplification and mutagenesis con appropriate fragments of mouse and human DNA sequences. The CC humanised 21.6 VI and a humanised 21.6 vH (see W22413) can be used to produce a claimed humanised 21.6 antibody that is useful in the CC manufacture of a medicament for treating asthma, atherosclerosis, CAIDS, dementia, diabetes, inflammatory bowel disease, rumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial constraints, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin CC may also be used in the affinity purification of alpha-4 integrin CC may also be used in the antibodies. The humanised antibody has a half-life in the human circulation essentially equivalent to that CC of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 100.0%;

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

on: Tue Mar 23 15:20:39 1999; MasPar time 1.37 Seconds 34.477 Million cell updates/sec

oular output not generated.

Description: Perfect Score: Sequence: >US-08-766-350A-4 (31-35) from US08766350A.pep (2 of 4) 31

Scoring table: PAM 150 Gap 11 1 VRSGA 5

Searched: 100342 seqs, 9469514 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-issued 1:5A\_COMB 2:5B\_COMB 3:PCT9\_COMB 4:backfiles1

Statistics: Mean 11.797; Variance 23.980; scale 0.492

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
